Semis Breadth-Capped Rotation (a07-rotation)

Strategy as submitted

Everything below is what the analyst submitted before the trading window ran. A result cannot be checked against a strategy that is not shown alongside it.

Discipline

pairs-rotation

Thesis

```
This engine cannot express relative strength: entry and exit are evaluated per symbol against that sym
```

Universe

AMD, AVGO, INTC, MRVL, MU, NVDA, QCOM, SOXX, TSM

Entry rule

```
close > sma(50) and rsi(14) > 55 and rsi(14) < 80
```

Exit rule

```
close < sma(50) or rsi(14) < 45
```

Brackets and sizing

Stop loss	12.00%
Take profit	20.00%
Max hold days	120
Max positions	3
Position size (fraction of equity)	30.00%
Designed through	2026-02-13

Trading window

Designed through 2026-02-13. Traded 2026-02-17 through 2026-08-18, 127 sessions. The design window and the trading window are different windows -- the design cutoff is before the first traded session -- which is what makes this an out-of-sample result rather than a fit graded on the data used to build it.

Results

Total return	40.71%
Max drawdown	-17.38%
Sharpe	—
Sortino	—
Volatility	—

Exposure	92.91%
Win rate	41.38%
Profit factor	2.08
Trade count	32

Reward:risk, planned versus realised

Planned is the ratio the card declared before trading (take-profit over stop-loss). Realised is what actually happened -- mean winning return over mean losing return -- since most trades exit on the rule or the time stop, not on either bracket.

Planned reward:risk (card)	1.67
Realised reward:risk	3.10

Benchmark comparison

Strategy total return	40.71%
Buy-and-hold benchmark return, same sessions	12.84%
Excess over benchmark	27.88%

Trades

32 trades.

Rejected orders

Orders the mock broker refused. A strategy whose orders were mostly rejected did not run as written, and omitting this list would describe a different strategy.

18 rejections.

Statistical significance

p-value (two-sided, binomial on the win/loss record): 0.38

q-value, corrected via Benjamini-Hochberg across the 26 strategies tried in this tournament: 0.89

Limitations

• 127 sessions is one market regime, not a sample of regimes. A strategy that worked here has not been shown to work in a rising-rate, high-volatility, or sideways regime -- only in whatever this one was.

• The traded universe was chosen because the user already trades these names. That is a selection effect, not a random or representative sample of the market, and it biases every result in this report in a direction that cannot be corrected after the fact.

• Fills are simulated: orders execute at the next session's open with deterministic adverse slippage applied by the mock broker. These are not real fills -- a live broker would fill some orders worse, and might reject orders this simulation accepted.

• This is a simulation of a trading strategy, not investment advice, and no figure in this report should be treated as a recommendation to trade.
