Broad-Index Oversold Reversion (a02-meanrev)

Strategy as submitted

Everything below is what the analyst submitted before the trading window ran. A result cannot be checked against a strategy that is not shown alongside it.

Discipline

mean-reversion

Thesis

```
Round 1 (43-symbol user universe) found RSI(14) oversold-in-uptrend (close>sma(200)) has a real but sp
```

Universe

DIA, VTV, QQQ, SPY, VUG, IWM

Entry rule

```
rsi(14) crosses_below 30 and close > sma(200)
```

Exit rule

```
rsi(14) crosses_above 50
```

Brackets and sizing

Stop loss	8.00%
Take profit	—
Max hold days	40
Max positions	4
Position size (fraction of equity)	25.00%
Designed through	2026-02-13

Trading window

Designed through 2026-02-13. Traded 2026-02-17 through 2026-08-18, 127 sessions. The design window and the trading window are different windows -- the design cutoff is before the first traded session -- which is what makes this an out-of-sample result rather than a fit graded on the data used to build it.

Results

Total return	0.35%
Max drawdown	-0.98%
Sharpe	—
Sortino	—
Volatility	—

Exposure	14.17%
Win rate	100.00%
Profit factor	—
Trade count	1

Reward:risk, planned versus realised

Planned is the ratio the card declared before trading (take-profit over stop-loss). Realised is what actually happened -- mean winning return over mean losing return -- since most trades exit on the rule or the time stop, not on either bracket.

Planned reward:risk (card)	—
Realised reward:risk	—

Benchmark comparison

Strategy total return	0.35%
Buy-and-hold benchmark return, same sessions	12.84%
Excess over benchmark	-12.48%

Trades

1 trade.

Symbol	Entry	Exit	Qty	Entry $	Exit $	PnL	Return	Reason
DIA	2026-03-13	2026-04-09	5	$470.17	$477.25	$35.33	1.50%	rule

Rejected orders

Orders the mock broker refused. A strategy whose orders were mostly rejected did not run as written, and omitting this list would describe a different strategy.

None. Every order this strategy sent was accepted.

Statistical significance

p-value (two-sided, binomial on the win/loss record): —

q-value, corrected via Benjamini-Hochberg across the 26 strategies tried in this tournament: —

Limitations

• 127 sessions is one market regime, not a sample of regimes. A strategy that worked here has not been shown to work in a rising-rate, high-volatility, or sideways regime -- only in whatever this one was.

• The traded universe was chosen because the user already trades these names. That is a selection effect, not a random or representative sample of the market, and it biases every result in this report in a direction that cannot be corrected after the fact.

• Fills are simulated: orders execute at the next session's open with deterministic adverse slippage applied by the mock broker. These are not real fills -- a live broker would fill some orders worse, and might reject orders this simulation accepted.

• This is a simulation of a trading strategy, not investment advice, and no figure in this report should be treated as a recommendation to trade.
