Confirmed Acceleration II (a03-momentum)

Strategy as submitted

Everything below is what the analyst submitted before the trading window ran. A result cannot be checked against a strategy that is not shown alongside it.

Discipline

momentum

Thesis

```
Round 1 found that on a concentrated AI/semiconductor megacap universe, this entry (ema(20) crosses_ab
```

Universe

SMH, IGV, XBI, GDX, ITA, EWZ, TAN

Entry rule

```
ema(20) crosses_above ema(50) and close > sma(200)
```

Exit rule

```
close crosses_below sma(200)
```

Brackets and sizing

Stop loss	12.00%
Take profit	—
Max hold days	180
Max positions	6
Position size (fraction of equity)	15.00%
Designed through	2026-02-13

Trading window

Designed through 2026-02-13. Traded 2026-02-17 through 2026-08-18, 127 sessions. The design window and the trading window are different windows -- the design cutoff is before the first traded session -- which is what makes this an out-of-sample result rather than a fit graded on the data used to build it.

Results

Total return	6.40%
Max drawdown	-5.54%
Sharpe	—
Sortino	—
Volatility	—

Exposure	74.02%
Win rate	0.00%
Profit factor	3.45
Trade count	6

Reward:risk, planned versus realised

Planned is the ratio the card declared before trading (take-profit over stop-loss). Realised is what actually happened -- mean winning return over mean losing return -- since most trades exit on the rule or the time stop, not on either bracket.

Planned reward:risk (card)	—
Realised reward:risk	3.69

Benchmark comparison

Strategy total return	6.40%
Buy-and-hold benchmark return, same sessions	12.84%
Excess over benchmark	-6.44%

Trades

6 trades.

Symbol	Entry	Exit	Qty	Entry $	Exit $	PnL	Return	Reason
GDX	2026-04-20	2026-04-30	14	$99.51	$88.86	$-149.14	-10.71%	stop
EWZ	2026-08-05	2026-08-10	41	$36.56	$35.28	$-52.53	-3.50%	rule
XBI	2026-04-06	—	11	$129.21	—	$339.90	23.91%	open_at_end
SMH	2026-04-09	—	3	$423.38	—	$439.17	34.58%	open_at_end
ITA	2026-06-01	—	6	$231.96	—	$121.20	8.71%	open_at_end
GDX	2026-08-12	—	16	$92.64	—	$-59.04	-3.98%	open_at_end

Rejected orders

Orders the mock broker refused. A strategy whose orders were mostly rejected did not run as written, and omitting this list would describe a different strategy.

None. Every order this strategy sent was accepted.

Statistical significance

p-value (two-sided, binomial on the win/loss record): —

q-value, corrected via Benjamini-Hochberg across the 26 strategies tried in this tournament: —

Limitations

• 127 sessions is one market regime, not a sample of regimes. A strategy that worked here has not been shown to work in a rising-rate, high-volatility, or sideways regime -- only in whatever this one was.

• The traded universe was chosen because the user already trades these names. That is a selection effect, not a random or representative sample of the market, and it biases every result in this report in a direction that cannot be corrected after the fact.

• Fills are simulated: orders execute at the next session's open with deterministic adverse slippage applied by the mock broker. These are not real fills -- a live broker would fill some orders worse, and might reject orders this simulation accepted.

• This is a simulation of a trading strategy, not investment advice, and no figure in this report should be treated as a recommendation to trade.
