Squeeze Release (a04-breakout)

Strategy as submitted

Everything below is what the analyst submitted before the trading window ran. A result cannot be checked against a strategy that is not shown alongside it.

Discipline

breakout

Thesis

```
A Bollinger squeeze (band width under 8% of price) marks a name where buyers and sellers have reached
```

Universe

SOXX, QCOM, TSM, NVDA, AVGO, DELL, ORCL, AMD, MU, MRVL, META

Entry rule

```
(bb_upper(20,2) - bb_lower(20,2)) < close * 0.08 and close crosses_above bb_upper(20,2)
```

Exit rule

```
close crosses_below sma(20)
```

Brackets and sizing

Stop loss	8.00%
Take profit	—
Max hold days	60
Max positions	5
Position size (fraction of equity)	20.00%
Designed through	2026-02-13

Trading window

Designed through 2026-02-13. Traded 2026-02-17 through 2026-08-18, 127 sessions. The design window and the trading window are different windows -- the design cutoff is before the first traded session -- which is what makes this an out-of-sample result rather than a fit graded on the data used to build it.

Results

Total return	9.14%
Max drawdown	-6.58%
Sharpe	—
Sortino	—
Volatility	—

Exposure	27.56%
Win rate	33.33%
Profit factor	4.46
Trade count	3

Reward:risk, planned versus realised

Planned is the ratio the card declared before trading (take-profit over stop-loss). Realised is what actually happened -- mean winning return over mean losing return -- since most trades exit on the rule or the time stop, not on either bracket.

Planned reward:risk (card)	—
Realised reward:risk	8.54

Benchmark comparison

Strategy total return	9.14%
Buy-and-hold benchmark return, same sessions	12.84%
Excess over benchmark	-3.70%

Trades

3 trades.

Symbol	Entry	Exit	Qty	Entry $	Exit $	PnL	Return	Reason
META	2026-05-29	2026-06-02	3	$633.82	$602.94	$-92.69	-4.87%	rule
AVGO	2026-06-01	2026-06-05	4	$450.32	$407.41	$-171.69	-9.53%	rule
QCOM	2026-04-17	2026-06-08	14	$136.76	$220.92	$1,178.15	61.53%	rule

Rejected orders

Orders the mock broker refused. A strategy whose orders were mostly rejected did not run as written, and omitting this list would describe a different strategy.

None. Every order this strategy sent was accepted.

Statistical significance

p-value (two-sided, binomial on the win/loss record): —

q-value, corrected via Benjamini-Hochberg across the 26 strategies tried in this tournament: —

Limitations

• 127 sessions is one market regime, not a sample of regimes. A strategy that worked here has not been shown to work in a rising-rate, high-volatility, or sideways regime -- only in whatever this one was.

• The traded universe was chosen because the user already trades these names. That is a selection effect, not a random or representative sample of the market, and it biases every result in this report in a direction that cannot

be corrected after the fact.

• Fills are simulated: orders execute at the next session's open with deterministic adverse slippage applied by the mock broker. These are not real fills -- a live broker would fill some orders worse, and might reject orders this simulation accepted.

• This is a simulation of a trading strategy, not investment advice, and no figure in this report should be treated as a recommendation to trade.
