# Fast Reversion II (a09-fastrev)

## Strategy as submitted

Everything below is what the analyst submitted before the trading window ran. A result cannot be checked against a strategy that is not shown alongside it.

### *Discipline*

mean-reversion

### *Thesis*

```
Round 1 found that a short, sharp RSI(3)<15-and-close<bb_lower(10,2) dislocation in liquid semiconduct
```

### *Universe*

XLK, XLF, XLI, SPY, XLC, XLY, RSP, IWM, EEM, XLV, EFA, QQQ

### *Entry rule*

```
rsi(3) < 15 and close < bb_lower(10,2)
```

### *Exit rule*

```
close crosses_above ema(5)
```

### *Brackets and sizing*

| | |
|---|---|
| **Stop loss** | 7.00% |
| **Take profit** | 5.00% |
| **Max hold days** | 8 |
| **Max positions** | 6 |
| **Position size (fraction of equity)** | 15.00% |
| **Designed through** | 2026-02-13 |

## Trading window

Designed through 2026-02-13. Traded 2026-02-17 through 2026-08-18, 127 sessions. The design window and the trading window are different windows -- the design cutoff is before the first traded session -- which is what makes this an out-of-sample result rather than a fit graded on the data used to build it.

## Results

| | |
|---|---|
| **Total return** | 2.96% |
| **Max drawdown** | -3.89% |
| **Sharpe** | — |
| **Sortino** | — |
| **Volatility** | — |

| | |
|---|---|
| **Exposure** | 36.22% |
| **Win rate** | 62.50% |
| **Profit factor** | — |
| **Trade count** | 32 |

### *Reward:risk, planned versus realised*

Planned is the ratio the card declared before trading (take-profit over stop-loss). Realised is what actually happened -- mean winning return over mean losing return -- since most trades exit on the rule or the time stop, not on either bracket.

| | |
|---|---|
| **Planned reward:risk (card)** | 0.71 |
| **Realised reward:risk** | — |

### *Benchmark comparison*

| | |
|---|---|
| **Strategy total return** | 2.96% |
| **Buy-and-hold benchmark return, same sessions** | 12.84% |
| **Excess over benchmark** | -9.88% |

## Trades

32 trades.

## Rejected orders

Orders the mock broker refused. A strategy whose orders were mostly rejected did not run as written, and omitting this list would describe a different strategy.

None. Every order this strategy sent was accepted.

## Statistical significance

p-value (two-sided, binomial on the win/loss record): —

q-value, corrected via Benjamini-Hochberg across the 26 strategies tried in this tournament: —

## Limitations

• 127 sessions is one market regime, not a sample of regimes. A strategy that worked here has not been shown to work in a rising-rate, high-volatility, or sideways regime -- only in whatever this one was.

• The traded universe was chosen because the user already trades these names. That is a selection effect, not a random or representative sample of the market, and it biases every result in this report in a direction that cannot be corrected after the fact.

• Fills are simulated: orders execute at the next session's open with deterministic adverse slippage applied by the mock broker. These are not real fills -- a live broker would fill some orders worse, and might reject orders this simulation accepted.

• This is a simulation of a trading strategy, not investment advice, and no figure in this report should be treated as a recommendation to trade.
